ABOUT ME

Software engineer with over 5 years of experience across web applications, and AI-driven solutions. My work spans designing scalable microservices, building data ingestion pipelines, and developing Retrieval-Augmented Generation (RAG) systems using Large Language Models. I have practical experience with technologies such as React, Spring Boot, and LangChain to build intelligent knowledge retrieval solutions.

WORK EXPERIENCE

FULL STACK SOFTWARE ENGINEER – FREIHEIT.COM TECHNOLOGIES GMBH – July 2023 – September 2026 – HAMBURG, GERMANY

Storage And Sync Team

The team is responsible of maintaining media types and patient information for a medical application, My key responsibilities included:

- Evaluated and compared end-to-end testing frameworks (Patrol, Playwright, and Flutter testing tools) to select and implement the most suitable E2E testing solution for a Flutter application.
- Refining, implementing, and maintaining a microservices-based codebase using Go.

AnalyticsOne Team

The team focused on harmonizing different workflows to support engineers and researchers in performing analytical calculations on time-series data. My main responsibilities included:

- Assisted a PhD researcher in migrating analytical calculations to the cloud by developing orchestrator and worker services in Python and deploying them using Kubernetes.
- Integrated the developed services into an existing platform built with Java and Spring Boot.
- Contributed to refining the integration of multiple tools within the platform to create more streamlined and unified workflows.

CTS Knowledge Search Team

The project focused on AI-assisted knowledge retrieval for engineering documentation and troubleshooting workflows. We worked with large collections of technical manuals, engineering drawings, support cases, spreadsheets, and internal documentation. My responsibilities included:

- Processing and normalizing data from heterogeneous sources, including documents, spreadsheets, technical drawings, and metadata.
- Designing ingestion pipelines to index and structure data for efficient retrieval.
- Working with Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) approaches to improve knowledge discovery and question-answering over internal datasets.
- Responsible for maintaining the application by contributing to both LangChain backend and React frontend.
- Mentoring and supporting a new team member during his onboarding process.

Product Data Team

In this team, we were building an e-commerce system for a leading European company in consumer goods and retail. As a member of the Product Data Team, I was responsible for importing data from external source systems, processing it through a pipeline, aggregating it, and delivering it via a REST API to consumers, using a microservices-based architecture. My key responsibilities included:

- Handled the migration of multiple functionalities of a monolithic Java application, to a microservices-based codebase using Kotlin and Spring Boot. Including non EU country specific data, and carefully handle crucial topics such as prices.
- Managing and provisioning infrastructure with Terraform.
- Serving as the team's "Bug Dispatcher," acting as the first point of contact for bug reports, resolving issues, or assigning them to the appropriate developer.

RESEARCH AND DEVELOPMENT ENGINEER – SCASE LTD – November 2020 – December 2022 – LATTAKIA, SYRIA

Sensor Tooling Team
Collaborating on Intenta S-2000 Sensor. Responsibilities:

- Building internal and external tools for sensor integration and configuration using Qt and Angular frameworks.
- Contributed to the development of various services as part of the sensor's firmware.
- Developed robust C++ libraries for integration with sensor tools and services.

INTERESTS

Beyond software development, I am passionate about competitive programming and algorithmic problem solving. Over the years, I have participated in numerous local and regional ICPC contests in different roles, including contestant, coach, problem setter, and judge. Some of my most notable achievements include:

- Champion of the local programming contest at my university in 2016, competing among 56 teams.
- Qualified twice as a regional ICPC contestant in 2016 and 2019.
- Coach of a team that qualified for the 2023 ICPC World Finals, held in Luxor, Egypt, in April 2024.
- Served as a judge, problem setter, and problem tester for multiple local and national programming contests in Syria and Egypt.
- Since 2021, led the training and coaching program at my university, including designing learning materials, organizing training camps, and teaching algorithms and problem-solving techniques. These efforts contributed to two teams from my university qualifying for the ICPC World Finals in 2023 and 2024.
- A complete overview of my contributions can be found on my ICPCID.

EDUCATION

September 2014 – March 2020 Latakia, Syria
COMMUNICATION AND ELECTRONICS ENGINEERING, Tishreen University

SKILLS

React | Spring Boot | LangChain | PostgreSQL | C++ | Python | Kotlin | Java | Go | AWS | GCP | Open Search | GitLab CI/CD | kubernetes | LLM | RAG | Microservices | Problem Solving (Problem Analysis)
